

Ardea Builder

Ardea Builder is the perfect tool for the Technical Department of a pumps manufacturing company.

Create a set of pump families and collect in every family all the common features of the pumps.

Add to every family all the pumps you need.

There's no limit on the number of pumps you can manage in the database.

Define the applications and the services for which the pumps are suitable.

Manage components, materials and pumps configuration.

Add performance curves (head, power, efficiency, iso-efficiency and NPSH) to every pump. The advanced curves management tools and mathematical algorithms make the curves creation and editing really easy.

Define how the performances change according to the speed, the materials, the number of stages, the impeller type, the support.

Manage all the revisions for every single pump, tracking the history of your products.
